EAM ANALYTICS

Make quick and accurate decisions to increase your plant productivity by strategically analyzing charts and maintenance KPIs.

Costs

Analyze costs with material & labor and compare expenses between different plants and equipment.

Services

Analyze your plant's backlog activity, service history, pending activities and compliance with maintenance plans.

Teams

Identify differences between actual pointing and predicted capacity, as well as the greatest deviations between work centers.

Monitoring

Analyze equipment data, detour tracking, out-of-parameter measurements and inspection statuses.

Assets

View all history – and pending services – of maintenance, measurements, and material consumption for every asset in your plant.

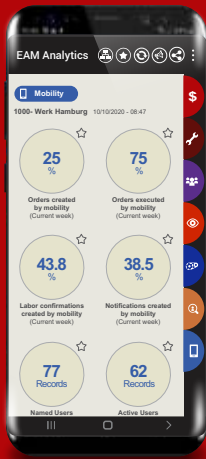

People

Track maintenance orders by work center, staff, and manpower. See completed & pending, appointments, departures, and services.

Mobility

Review the key usage information for Mobile EAM and monitor the maintenance team's activities in detail.

Get to know the ideal SAP-integrated tool for performance indicators and real-time plant alerts & KPIs.

Make quick and accurate decisions to increase your plant productivity by strategically analyzing charts and maintenance KPIs.

Main Benefits

- 
Efficient use of resources and operational efficiency
 Have a weekly, monthly, and annual view of technical objects that need intervention to improve plant performance.
- 
Better control of maintenance and operations
 Decide through interactive and customizable charts what actions should be taken to improve your plant's productivity and maintenance team.
- 
Monitoring indicators
 Respond quickly in case of critical scenarios, receiving smart alerts on strategic assets.
- 
Better cooperation for taking actions
 Share information, report anomalies and deviations from the maintenance team, and take strategic action quickly.
- 
Reduction of operational costs
 Establish and automate the needed digital infrastructure to better manage your plant, and find needed data immediately.
- 
Big Data geared towards Industry 4.0
 Solution focused on consolidating data from numerous sources and presenting key indicators for operations and maintenance.

Applied Technologies

Sigga EAM Analytics integrates with leading technologies to facilitate the generation, access and analysis of key performance indicators.
