

SIGGA

WAREHOUSE & INVENTORY

Efficiently manage your inventory, ensuring delivery and rapid movement of materials with simplicity, accuracy and security.

Inbound Delivery

Execute planned orders, create new orders for immediate service, reserve materials and record working time.

Goods Receipt

Perform material input from a receipt document, count, conference, and easily record changes.

Movement

Make electronic material reservations (online or offline), collect electronic signatures and automatically confirm updates.

Delivery

Mobilize the picking process from delivery documents, confirm the materials separation and update the data needed to complete the process.

Stock Overview

Check availability and general material status in MM and WM stocks. Use filters to make materials search even easier.

Inventory

Manage and electronically distribute inventory documents to the field counting process for review, approval and automatic submission of necessary SAP requirements.

Quality Inspection

Streamline the quality inspection process of materials, evaluate characteristics, record defects and make usage decisions.

Warehouse

Electronically confirm your Transfer Orders in the field, ensuring a faster and more accurate storage process.

Smart List

Separate reserved items and record in a digital list to expedite the servicing of reservations with large numbers of items.

Get to know the ideal, SAP-integrated tool for managing warehouse routines and inventory processes.

Mobile application for managing inventory routines and moving materials. The foundation of the modern, digitalized warehouse.

SAP® Certified
Powered by SAP NetWeaver®

Main Benefits

Increase productivity and efficiency

Eliminate bureaucratic tasks and paper waste. Consult live data and carry out storage operations any time, any place.

Reduce costs and inventory levels

Make rational decisions about purchasing materials with accurate and current data information, aligning your inventory levels with real internal demands.

Inventory management

Accurately control stored items through easy double-checks, inventory approval, and recounts to quickly resolve discrepancies.

Increase reliability

Perform systemic tracking of all receipts, entries, reservations and materials movement, with quantitative and qualitative control of items.

Reduce human error with automation

Lower operational errors, localization, identification and dispatch of materials through sensors, beacons, code readers and RFID tags.

Storage process optimization

Store materials by cost center, warehouse (MM) or position (WM), organized and within safety standards, eliminating errors and misplacements.

Applied Technologies

Mobile Warehouse & Inventory integrates with leading technologies to facilitate and optimize your warehouse processes.
